## CompassCom Vehicle Tracking Software Now Easily Accessed Through Cityworks

Centennial, CO (May 17, 2011) – Cityworks users who are looking for an AVL solution can now easily access long-time Cityworks business partner CompassCom, for integrated real-time mobile asset and fleet management. Using the single ESRI-based display used by Cityworks, users can reduce the number of applications they need to install and still enjoy the ROI of fleet efficiency.

Instead of having to log off of Cityworks and go to another application to monitor fleet activities, managers will be able to check on real-time status easily and seamlessly directly within Cityworks for public works, emergency response or utility vehicles. The CompassCom gateway, CompassLDE, manages mobile wireless and GPS data from an unlimited number of inputs, allowing fleet managers to track assets from multiple sources with complete interoperability, not having to alter their wireless carriers and even accommodating two-way radio communications.

“We are very pleased that Cityworks developed this interface to provide a terrific option for their customers who have been asking for a reliable AVL solution,” said W. Brant Howard, founder and CEO of CompassCom. “Now they can stay within the Cityworks program that their users are comfortable with and view the real-time, ESRI-powered ArcGIS information that they are used to, including their municipal vehicles.”

With CompassCom’s GPS-based fleet management, city managers can see detailed information on the status of vehicles such as street sweepers, snow plows, maintenance crews, emergency, and utility vehicles, and view their performance including data such as mileage, idle time, routes and stops taken, whether lights are flashing or the snowplow is down. Besides real-time visual tracking, CompassReports offers reporting capability that provides historical information crucial to efficiently and cost-effectively managing vehicle fleets.

“With CompassCom, the efficiencies and the level of interoperability that is built-in should make the Return on Investment in instituting an AVL program very clear,” said Howard. “We are glad we can add this value to Cityworks’ suite of programs, providing fleet management and control through a common viewer.”

###

### ***About CompassCom***

CompassCom®, an ESRI business partner, enables fleet management, ensuring worker safety, efficiency and accountability through reliable AVL solutions that integrate GPS, Geographic Information System (GIS) and wireless technology. CompassCom clients currently manage more than a hundred thousand vehicles, allowing government agencies, utilities operations, oil and gas companies and service fleet managers to monitor in real-time and provide reports for every asset with a push of a button. Our AVL systems are the most flexible in the industry, allowing customers to use their preferred wireless carriers, leverage their investment in GIS, host data on or off-site, choose a variety of hardware options and even work with their existing two-way radio systems. Training, consulting and partnering with our clients, we’ve been optimizing Return on Investment since 1994.
