

## FOR IMMEDIATE RELEASE

### Derry, New Hampshire PD Chooses CompassCom® GPS Tracking Integrated with Motorola® ASTRO P25 Network

**Derry, New Hampshire** - (April 22, 2020) - As part of a recent LMR system upgrade, the Derry New Hampshire Police Department recently installed CompassCom's GPS tracking system for police vehicles and handheld radios. CompassTrac® Enterprise enables enhance command and control for first responder resources. GPS location data from Motorola® APX Series Radios and Sierra Wireless in-vehicle modems are viewed in the Esri® based CompassTrac viewer. As a qualified Motorola Solution provider and Esri Business Partner, CompassCom delivers real-time location data in a common operational picture to empower decisions.

Derry's Police Captain describes the solution as providing an accurate, up to date GPS location for all vehicles and handheld radios. CompassTrac provides our Commanders and Dispatchers with real-time location of all assets enabling efficient response and coordination of assets to any call for service as it occurs. Using CompassTrac enhances both citizen safety and officer safety. "Our staff found the software intuitive and easy to use with minimal training time required," said Derry's Police.

Shortly after installation of CompassTrac, one of our officers called out via APX radio that he was engaged in a hot foot pursuit chase of a wanted person. Utilizing the CompassTrac software, the shift commander immediately polled that officer's portable radio and within seconds had a precise, geographic location of that officer displayed on the CompassTrac map at his desk as well as on the dispatcher's workstations. Back up officers were immediately dispatched to respond to the area and the suspect was quickly apprehended. "Since the initial installation, several months ago, we have experienced top notch service and prompt response to any questions we may have had by the technicians and engineers at CompassCom," said Derry's Police.

#### About CompassCom

CompassCom has been at the forefront of GPS Tracking industry as an Esri® Business Partner since 1994, providing enterprise-level mobile IoT solutions leveraging the Esri ArcGIS platform. **CompassTrac Enterprise** is deployed on-premise behind the user firewall to ensure secure operations. **CompassWorks**® managed cloud offering provides a hosted solution to users configured with Esri ArcGIS Online or the users GIS data to support workflows. **CompassCom for Developers** empowers integrators of Esri-centric workflows to utilize the CompassLDE® platform or CompassCom Apps to monitor smartphones, Motorola private mobile radios and mobile IoT equipped with GPS telematics. From AVL to enhanced command and control, CompassCom solutions provides a common operational picture for governments, public safety, defense, public works departments, DOTs and other organizations that want a real-time solution tailored to support their mission requirements.
