CompassCom for Integrators

CompassCom offers the industry's most flexible Platform and apps for MRM development, deployment of real-time data in the ArcGIS platform and integration of real-time data into 3rd party software solutions. If you are a developer, power user of ArcGIS or integrator of 3rd party software looking to add real-time mobile asset data, CompassCom has a platform, apps and telematics bundles to support your efforts to build application specific MRM.

CompassLDE (Location Data Engine)

The core of the CompassCom MRM platform delivered, installed and configured to meet the requirements of the customer. Bring Your Own Device (BYOD) technology enables your workforce to use the best hardware and IoT technology in the field to meet your workflow requirements.

CompassLDE Appliance

The core of the CompassCom MRM platform delivered and installed on a computer configured to meet the requirements of the customer. Bring Your Own Device (BYOD) technology enables your workforce to use the best hardware and IoT technology in the field to meet your workflow requirements.

LDEStream

CompassCom cloud PaaS delivers the full functionality of CompassLDE from the Cloud with Bring Your Own Device (BYOD) technology. Mobile devices report to a secure platform in a Managed Cloud or Private Cloud enabling connectivity via our web service API. IT professionals get to tailor their environments to deploy and update software on their own terms. LDEStream cloud PaaS helps organizations drive innovation and business transformation with real-time location and IoT data.

Apps

Systems architects can select from a suite of existing apps to combine with your custom development to deliver the complete MRM solutions to support your users

CompassTrac Viewer – CompassTrac app empowered by Esri® ArcGIS technology displays the location and status of vehicles, handsets, sensors or other high value assets in real time, using your background maps tailored to meet your workflow requirements. The CompassTrac app is a flexible solution that can be configured to meet your workflow requirements without turning your organization upside down.

CompassReports

CompassReports enables a higher level of command and control through on-the-fly analytics and past-performance reporting of your mobile workforce. Analytics enable after action planning and data to support decisions to improve efficiency and safety.

CompassAlerts

Real-time alerts where and when user defined action occurred.

CompassDiagnostics

Real-Time monitoring of selected engine diagnostics parameters for vehicles. J-Bus, OBDII and CAN bus data for individual units or the entire fleet.
