

Track It

CompassWorks provides users with the enhanced CompassTrac feature set in a managed cloud environment. Our SaaS MRM Solution leverages your **ESRI** ArcGIS licensing to reduce operational costs, increases security and provides an enhanced Fleet Management solution. Our managed cloud environment is a state-of-the-art facility meeting all required certifications for security, environmental, daily redundant data backup and support. A simple web-based access enables access to the full **CompassWorks** solution from browsers such as Chrome®, FireFox®, Internet Explorer®, Edge®.

Key components to the **CompassWorks** solution include **CompassLDE**, **CompassTrac**, and **CompassReports**, and the various output connectors.

CompassWorks

CompassWorks brings your AVL solution to life rapidly with ease and enables a growth platform to monitor all your valuable assets within your organization:

- Free unlimited viewers
- Increased business agility
- Reduced IT overhead (resources, security, maintenance, network, performance)
- Eliminates IT HW obsolescence
- Reduces customer support time required
- Rapid deployment to feature upgrades
- Ease to scale (mobile units, viewers, users, and departments)
- Simple procurement and maintenance (one monthly payment)

CompassLDE is a universal AVL and Mobile Resource Management platform supporting Bring Your Own Device technology to deliver data via standard internet protocols. CompassLDE adheres to specific SQL Standard protocols for storage and queries supporting the historical reporting, and historical playback features. Moreover, CompassLDE serves as the data source for popular output connectors such as ESRI's GeoEvent, CityWorks, and the OpenAPI for custom interfaces.

CompassTrac, empowered by Esri® ArcGIS technology, is a viewer displaying the location and status of vehicles, handsets, sensors, or other high value assets in real time, using your background maps tailored to meet your workflow requirements. Additionally, CompassTrac provides playback of all recorded data for historical purposes. CompassTrac is a flexible solution that can be configured to meet your workflow requirements without turning your organization upside down.

CompassReports provides an easy to use, convenient means to get accurate historical information on critical asset performance allowing managers to enhance safety, empower efficiency, and enable accountability. Standard reports included are: Mileage, Speed, Stop/Idle, Activity, Inputs, Geofence, NonReporting, Snow, and Alerts. Additionally, users may select to schedule reports to automatically run reports on prescribed recurring date & time and distribute specific report to a predefined distribution list.
