Gain insight into the operations of your high-value mobile assets, increase efficiencies, and make better decisions

CompassCom GPS tracking provides the visualization, reporting, and data analytics that enable your organization to improve safety, efficiency, and accountability.

Location data that works for you...

The CompassCom Difference

- The on-premise solution for tracking Motorola Radios
- "Plug and Play" capability through output connectors to Esri, Cityworks and other asset and work order management systems
- Customize your viewing preferences through Esri Map Services
- Easy integration, open API to meet your custom workflow requirements
- Tracking of multiple asset types - both mobile and static
- Custom asset tracking, including spreader controller details such as snow plow material utilization
- Post acquisition reporting and historical replay
- Support "Bring Your Own Device" configurations
- CompassCom products are available through the GSA Schedule
